

**Regence BlueShield of Idaho  
Preliminary Rate Increase Justification for 2024  
Individual Health Benefit Plans**

**Rate Change**

The projected average rate change for plans effective January 1, 2024 is -3.3% which is an average rate change of about -\$16 per member per month (pmpm). Because -3.3% (or about -\$16) is an average, it is possible to have a different rate change. Factors affecting a member's premium are age, tobacco use, family composition, plan, and geographic area. Expected cost differences by product are updated every year to ensure premium differences are appropriate. Regence has approximately 15,100 members enrolled in this line of business as of March 2023.

**Percentage rate changes for major groupings that differ from the overall rate change:**

Rating Area						
Area 1	Area 2	Area 3	Area 4	Area 5	Area 6	Overall
-5.2%	-6.7%	-1.6%	-4.6%	-4.5%	-2.0%	-3.3%

Metal			
Bronze	Silver	Gold	Overall
-3.3%	-3.2%	-3.8%	-3.3%

**Most Significant Factors**

The rate change described above is driven by the following factors:

- Claims Trend : 7%
- Lower than Expected Claims : -8%
- Change in High Risk Pool : -4%
- Change in Benefits, Area, and Network : 2%
- Change in Market Morbidity : 1%
- Rx Rebates : -1%
- **Total: -3%**

**Financial Experience**

The 2022 ACA unadjusted premium revenue was \$53,412,808 (\$516 pmpm), compared to total estimated incurred claims of \$40,385,925 (\$390 pmpm). This produced an unadjusted loss ratio of 75.6%. Premium revenue will be adjusted by the 2022 Risk Adjustment transfer, currently estimated as a receipt of \$17 pmpm. Any variations from the estimates for the federal risk adjustment will not be known until the summer of 2023 and could significantly impact financial results.

**Key Assumptions**

The annual cost trends used in developing the 2024 rates:

- Medical : 8.0%
- Rx : 9.7%
- Medical and Rx Blended: 8.5%

To determine projected trend for the rating period, Regence BlueShield of Idaho analyzed the individual components of trend - change in reimbursement, utilization, mix and intensity, and leverage. High Rx cost trends are driven by the increased prevalence of specialty drugs in the market, new specialty drugs expected to be introduced, the high cost per specialty prescription, and the lack of low cost substitutes for these drugs. Blended trend is calculated by weighting Medical and Rx trends based on their relative contribution to claims in the experience period.

The 2024 rates are made up of the following components:

- Claims: 82.0%
- Administrative Costs: 7.7%
- Federal taxes and fees: 0.7%
- State taxes and fees: 4.1%
- Commissions: 2.5%
- Contribution to surplus, profit, and risk margin: 3.0%

Claims costs represent estimated incurred claims. They are net of BlueCard access fees, expected Rx rebates and risk adjustment transfer payments.
